Wholesale Catalog - Spring Edition

LOCATION.

OUR NURSERIES are located near Morrisville, Bucks County, Pa., across the Delaware River from Trenton, N. J. They are quickly accessible from New York or Philadelphia by express trains to Trenton, N. J., over either the Pennsylvania or Reading Railroads. Carriages may be secured at the depots, or suburban trolleys at Warren and Hanover streets. All cars for Yardley, Pa., pass our nurseries, located one and one-half miles distant from the trolley terminus.

The popular automobile route from New York to Philadelphia passes within one-fourth mile of our place. Those who can would enjoy this means of visiting us.

A CONSTANTLY increasing business for 41 years encourages us in the belief that our carefully grown stock is meeting a public need. In consequence of this encouragement we have added several varieties to our stock since the last edition of this catalog. Evergreens that have always been a specialty of ours are offered in as large assortment as ever. It is in Deciduous trees (1½ to 2½ inches in caliper) that we offer exceptional stock, both as to quantity and quality. Our usual complete assortment of other lines will also be found listed herein.

LOCATION AND SHIPPING.—Our shipping facilities are exceptionally good. We are located just across the Delaware River from Trenton, N. J., which has freight and express service over the Philadelphia & Reading Railway, connecting with the Baltimore & Ohio and over the Pennsylvania Railroad, which radiates in five directions. Besides its direct route to New York and Philadelphia the Belvidere division runs toward the north, the Amboy division goes into New Jersey, the "Trenton Cut-off" takes Western freight, eliminating delay or change at Philadelphia. The success that has attended our many distant shipments should be assurance that no matter how far away, you are not debarred from "Moon's Hardy Trees and Plants for Every Place and Purpose." There is boat service from Trenton to New York and Philadelphia, where connections include Boston, Providence, Hudson River points and Baltimore.

ON GUARANTEEING AND PRESENTATION OF CLAIMS.—When stock is sold at wholesale prices, as given in this catalog, we assume no responsibility for the failure of our product to grow, although, of course, we endeavor to exercise every care that will cause them to transplant successfully. The responsibility that we do, however, assume is the safe arrival of our goods at destination, beyond this we have no control and therefore should not and are not to be held liable. Claims for shortage, poor arrival of shipments and others of whatever nature must be presented within ten days after the arrival of the consignment.

TERMS.—Cash with order, or satisfactory references from those with whom we have not had previous dealings, otherwise a credit of thirty days from the date of invoice.

Prices in this catalog include packing, and are f. o. b. cars at our shipping point.

We exercise the greatest care in growing and handling our stock so that it will transplant successfully.

Its arrival in good condition is guaranteed, but as the care which the stock receives after leaving our hands is entirely beyond our control, we assume no responsibility for its failure to grow when sold at wholesale rates as listed here.

Claims of whatever nature must be presented within 10 days after the arrival of the goods.

Norway Spruce.

P. excelsa. The most generally used of the Spruces, and properly so, because it grows rapidly, does well in most soils and coldest exposures. Untrimmed it will make splendid specimens, also windbreaks and shelter belts. If planted as hedges and sheared they become impenetrable.

The Golden and the Silver Retinosporas.

Two of the best evergreens to use for color contrasts. They transplant easily and grow well anywhere except in the most exposed places. Especially are they suited for seashore use, bedding, groups, window boxes, vases, formal and specimen planting.

Fifteen thousand of these Retinosporas in our stock, some of them small enough for nursery planting, others for beds and groups and still others that are large specimens, that will make splendid immediate effects.

Stock offered in this catalogue is grown here on our own grounds. We do not carry stock over winter in a cellar.

In buying from us you gain the advantage of having every plant dug freshly from the ground especially for your order.

Arborvitæ—(Continued).

var. pyramidalis. **Pyramidal Arborvitæ.** This variety possesses foliage of finer texture and more dense habit than the American Arborvitæ, which it closely resembles. One of the principal differences is, that in Winter this sort remains a lustrous green, whereas the other turns to a more brown hue.

Ulmus : The Elms.

Ulmus Americana. American Elm. The beauty of many New England streets demonstrates the value of this tree for such planting. Owing to its nature of growth it is easy to maintain a greensward under these trees. On this account and because of its grace and beauty, the Elm is one of the best trees for lawn, street and park planting.

Stock offered in this catalogue is grown here on our own grounds. We do not carry stock over winter in a cellar.

In buying from us you gain the advantage of having every plant dug freshly from the ground especially for your order.

Prices in this catalog include packing, and are f. o. b. cars at our shipping point.

We exercise the greatest care in growing and handling our stock so that it will transplant successfully.

Its arrival in good condition is guaranteed, but as the care which the stock receives after leaving our hands is entirely beyond our control, we assume no responsibility for its failure to grow when sold at wholesale rates as listed here.

Claims of whatever nature must be presented within 10 days after the arrival of the goods.

Hibiscus Syriacus.**ALTHEA OR ROSE OF SHARON.**

These are grand flowering shrubs. There is a wide range of color, and not a day from the middle of July until September—a time when so few other shrubs are in bloom—that Altheas are not aglow with flowers. They have no insect enemies, grow well anywhere, are splendidly suited for shrubbery borders, for colony plantings and hedges.
